

INTELLIGENCE SUMMARY

The business generated **R2,118,822 excl VAT** over the last 30 days across 3 stores and Shopify.

**Centurion dominates at 65% of store revenue** (R1,337,591), with 2,236 transactions at an average basket of R598. This is your engine — it's running well.

**Edenvale (19%, R382,354)** is your second store but has the lowest average basket at R410 vs Centurion's R598. There's a R188 basket gap between your strongest and weakest store — that's a ranging and upsell problem, not a footfall problem.

**Glen Village (16%, R336,834)** is the smallest but has a R461 avg basket — stronger than Edenvale per transaction. Fewer customers, but they're spending more per visit.

**Online is 2.9% of combined revenue** — R62,043 from 92 orders at R674 AOV. The channel is small but the AOV is strong. Discount rate at 16.3% is elevated and needs watching.

You have **R3,318,456 locked in stock at cost** — that money is either working for you or sitting idle.

**The dead weight:** R142,746 is tied up in 50 products that keep getting reordered despite not moving. The worst offenders — MAG 7/87 60'S (10x orders, 86 units), 1L GUT RAWBIOTICS (4x, 55 units), FLORISH SPORE PROBIOTIC 60C (5x, 23 units) — are a PAR level problem. Someone is reordering on autopilot. Stop these until stock clears.

**The opportunity:** 40 products have margin ≥40% and are well-stocked. These are your profit drivers sitting on the shelf. The top 5 average 49.5% margin. Put them front-of-shelf, run a staff push, and feature them online.

**The risk:** 50 products are at ≤5 units. 50 of those are high-value (>R500 excl VAT each). If you sell one more unit and can't reorder fast, you lose the sale and the customer. Some of these have no PO ever placed — they're being forgotten.

Three things need your attention today.

- 1. Reorder FIRE BOWL 200MM** — 50 high-value products are at ≤5 units with no or stale POs. Each one is a missed sale at full margin.
- 2. Stop reordering MAG 7/87 60'S** — you've ordered it 10 times this year and have 86 units on the shelf. Whoever controls the PAR levels needs to see this data.
